

Recombinant Mycobacterium tuberculosis Rv2672 protein, His-tagged

Cat. No. Rv2672-910M **Lot. No.** (See product label)

SPECIFICATION

Product Overview

C-terminal 6xHis fusion protein of Rv2672 Antigen (M. Tuberculosis/H37Rv)(a.a.1-528) (Genbank Accession No. NP_217188). Possible secreted protease, equivalent to O05685|MLC1351.24|ML1339 putative secreted protease from Mycobacterium leprae (525a.a.). Predi

Species

Mycobacterium tuberculosis

Source

E.coli

ProteinLength

aa1-528

Description

Mycobacterium tuberculosis is an obligate pathogenic bacterial species in the family Mycobacteriaceae and the causative agent of tuberculosis. First discovered in 1882 by Robert Koch, M. tuberculosis has an unusual, waxy coating on its cell surface primarily due to the presence of mycolic acid. This coating makes the cells impervious to Gram staining, and as a result, M. tuberculosis can appear either Gram-negative or Gram-positive. Acid-fast stains such as Ziehl-Neelsen, or fluorescent stains such as auramine are used instead to identify M. tuberculosis with a microscope. The physiology of M. tuberculosis is highly aerobic and requires high levels of oxygen. Primarily a pathogen of the mammalian respiratory system, it infects the lungs. The most frequently used diagnostic methods for tuberculosis are the tuberculin skin test, acid-fast stain, culture, and polymerase chain reaction.

Form	Each vial contains 100 g of lyophilized protein in PBS with 8M Urea. Reconstitute the protein with 103 µof Millipore water.
Purity	>95%, based on SDS PAGE
Applications	WB standard, antibody ELISA, immunogen, etc.
Storage	Before reconstitution, stable for 1 year at -20°C from the date of shipment. After reconstitution, stable for a month at 4°C. Nonhazardous. No MSDS required.

GENE INFORMATION

Gene Name	Rv2672 protease [Mycobacterium tuberculosis H37Rv]
Official Symbol	Rv2672
Synonyms	Rv2672; protease
Gene ID	887398
Protein Refseq	NP_217188.1
UniProt ID	P71969
