

Active Recombinant Human RHOT1 protein, His-tagged

Cat. No. RHOT1-261H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human RHOT1(Ile186 - Thr591) fused with His tag at N-terminal was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	186-591 a.a.
Description	Mitochondrial Rho GTPase 1 (also known as Miro1 or Rhot1) is a membrane associated GTPase with a predicted molecular weight of 71 kDa. Miro1 has been reported to directly associate with the KIF5 motor protein, allowing mitochondria to move along microtubules. A number of publications have identified Miro1 as an in vivo substrate for the E3 Ubiquitin ligase Parkin (encoded by the PARK2 gene), an essential component of the cellular machinery that participates in the removal of damaged mitochondria. This protein is useful as an in vitro substrate for activated recombinant Parkin enzyme.
Form	X mg/ml (X µM) in 50 mM HEPES, 200 mM NaCl, 2 mM TCEP
Bio-activity	Reaction Conditions will be optimized for each specific application. In a 50 µl reaction containing 1 µM activated Parkin E3 ligase, 1 µM His6-Miro1 is fully converted to Ubiquitinated forms in 60 minutes.
Molecular Mass	Predicted Molecular Mass: 50 kDa
