

Recombinant Human PCK1, His-tagged

Cat. No. PCK1-29962TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length protein of Human PCK1 fused to His tag at N-terminus, 646 amino acids with a predicted MWt 71.7kDa.
Species	Human
Source	E.coli
ProteinLength	622 amino acids
Description	This gene is a main control point for the regulation of gluconeogenesis. The cytosolic enzyme encoded by this gene, along with GTP, catalyzes the formation of phosphoenolpyruvate from oxaloacetate, with the release of carbon dioxide and GDP. The expression of this gene can be regulated by insulin, glucocorticoids, glucagon, cAMP, and diet. Defects in this gene are a cause of cytosolic phosphoenolpyruvate carboxykinase deficiency. A mitochondrial isozyme of the encoded protein also has been characterized.
Conjugation	HIS
Molecular Weight	71.700kDa inclusive of tags
Tissue specificity	Major sites of expression are liver, kidney and adipocytes.
Form	Liquid
