

Recombinant Human PDE4B, GST-tagged

Cat. No. PDE4B-30819TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length PDE4B protein (Human) with an N terminal GST tag. MW 109kDa. Source: Baculovirus infected Sf9 cells.
Species	Human
Description	This gene is a member of the type IV, cyclic AMP (cAMP)-specific, cyclic nucleotide phosphodiesterase (PDE) family. Cyclic nucleotides are important second messengers that regulate and mediate a number of cellular responses to extracellular signals, such as hormones, light, and neurotransmitters. The cyclic nucleotide phosphodiesterases (PDEs) regulate the cellular concentrations of cyclic nucleotides and thereby play a role in signal transduction. This gene encodes a protein that specifically hydrolyzes cAMP. Altered activity of this protein has been associated with schizophrenia and bipolar affective disorder. Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
