Recombinant Human PPARG, His-tagged

Cat. No. PPARG-30104TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human PPAR gamma with an amino-terminal hexahistidine tag
Species	Human
Source	E.coli
Description	This gene encodes a member of the peroxisome proliferator-activated receptor (PPAR) subfamily of nuclear receptors. PPARs form heterodimers with retinoid X receptors (RXRs) and these heterodimers regulate transcription of various genes. Three subtypes of PPARs are known: PPAR-alpha, PPAR-delta, and PPAR-gamma. The protein encoded by this gene is PPAR-gamma and is a regulator of adipocyte differentiation. Additionally, PPAR-gamma has been implicated in the pathology of numerous diseases including obesity, diabetes, atherosclerosis and cancer. Alternatively spliced transcript variants that encode different isoforms have been described.
Conjugation	HIS
Tissue specificity	Highest expression in adipose tissue. Lower in skeletal muscle, spleen, heart and liver. Also detectable in placenta, lung and ovary.
Form	Liquid
Purity	>95% by SDS-PAGE
