

Active Native Agaricus bisporus lectin Protein, Agarose bound

Cat. No. Lectin-1763A **Lot. No.** (See product label)

SPECIFICATION

Product Overview	This product is the Agarose bound Agaricus bisporus lectin and has sugar specificity against Gal(b-1,6)GalNAc (T disaccharide).
Species	Agaricus bisporus
Source	Agaricus bisporus
Description	Agaricus bisporus lectin (ABL) isolated from the edible white button mushroom, is composed of two to four very similar isolectins, each a tetramer of approximately 17 kD subunits. This lectin binds the Thomsen-Friedenreich antigen, also called T disaccharide, galactosyl (β -1,3) N-acetylgalactosamine. Unlike peanut agglutinin, which does not bind sialylated T antigen, ABL binds either sialylated or asialylated forms. Also, whereas peanut agglutinin has a proliferative effect on cancer cells, ABL is anti-proliferative, apparently without cytotoxicity. ABL binds all blood groups and O-linked glycans of IgA subclasses. Simple mono- and disaccharides are only marginally inhibitory.
Bio-activity	Sugar Specificity: Gal(b-1,3)GalNAc (T disaccharide) Binding Capacity: > 1.5 mg fetuin/ml gel
Applications	Glycobiology; Affinity Chromatography
Storage	Refrigerate. DO NOT FREEZE.
Concentration	2 mg/ml of settled gel
