

Active Native Griffonia Simplicifolia Lectin I Protein, Biotinylated

Cat. No. Lectin-1779G **Lot. No.** (See product label)

SPECIFICATION

Product Overview	This product is the Biotinylated Griffonia (Bandeiraea) Simplicifolia Lectin I and has sugar specificity against Galactose, N-Acetylgalactosamine.
Species	Griffonia Simplicifolia
Source	Griffonia Simplicifolia
Description	GSL I is a family of glycoproteins with molecular weights of approximately 114 kDa. There are two types of subunits, termed A and B , with slightly different molecular weights. These subunits combine to form tetrameric structures, resulting in five isolectins. The A -rich lectin preferentially agglutinates blood group A erythrocytes and thus appears to be specific for α-N-acetylgalactosamine residues, while the B -rich lectin preferentially agglutinates blood group B cells and is specific for α-galactose residues. This GSL I is a mixture of the five isolectins. GSL I has been reported to bind several glycoproteins including laminin.
Form	10 mM HEPES, pH 7.5, 0.15 M NaCl, 0.08% sodium azide, 0.1 mM Ca ²⁺ .
Bio-activity	Inhibiting/Eluting Sugar: mixture of 200 mM galactose/200 mM N-acetylgalactosamine. Carbohydrate-Binding Specificity: Galactose, N-Acetylgalactosamine.
Molecular Mass	114 kDa

 Tel: 1-631-559-9269 1-516-512-3133

 45-1 Ramsey Road, Shirley, NY 11967, USA

Applications	Immunohistochemistry / Immunocytochemistry, Immunofluorescence, Blotting Applications, Elispot, ELISAs
Usage	For most applications we recommend a freshly prepared working solution of 5-20 g/ml.
Storage	Refrigerate; for long term storage, aliquots may be stored frozen.
Concentration	2 mg/ml
GENE INFORMATION	
Synonyms	Lectin; GSL I; BSL I
UniProt ID	Q8W1R6
