SPECIFICATION

Product Overview	This product is the Fluorescein labeled Artocarpus integrifolia Jacalin and has sugar specificity against Galactose. The excitation maximum is at 495 nm and the emission maximum is at 515 nm.
Species	Artocarpus integrifolia

Description	Jacalin is a lectin composed of four subunits of approximately 16 kDa each. This lectin appears to bind only O-glycosidically linked oligosaccharides, preferring the structure galactosyl (β -1,3) N-acetylgalactosamine. This structure (the T-antigen) is the oligosaccharide to which peanut agglutinin (PNA) binds. However, unlike PNA, Jacalin will bind a mono- or disialylated form of this structure. This lectin has been used to purify human IgA. The specificity of this lectin also affords the opportunity to localize or isolate glycoproteins with O-glycosidically linked oligosaccharide side chains.
