Cat. No. Lectin-1798L **Lot. No.** (See product label)

SPECIFICATION

Product Overview	This product is the Fluorescein labeled Lotus Tetragonolobus Lectin and has sugar specificity against Fucose, Arabinose. The excitation maximum is at 495 nm and the emission maximum is at 515 nm.
Species	Lotus tetragonolobus
Source	Lotus tetragonolobus
Description	Lotus tetragonolobus lectin is a family of closely related glycoproteins that appear to have similar specificities toward α -linked L-fucose containing oligosaccharides. Although many of the binding properties of Lotus lectin are similar to those of Ulex europaeus lectin I, the binding affinities and some specificities for oligosaccharides are significantly different between these fucose-specific lectins.
