

Recombinant Human PPP1CA, His-tagged

Cat. No. PPP1CA-31049TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human PPP1A with an N terminal His tag; 350 amino acids with the tag; observed mwt: 39.7 kDa.
Species	Human
Source	E.coli
ProteinLength	330 amino acids
Description	The protein encoded by this gene is one of the three catalytic subunits of protein phosphatase 1 (PP1). PP1 is a serine/threonine specific protein phosphatase known to be involved in the regulation of a variety of cellular processes, such as cell division, glycogen metabolism, muscle contractility, protein synthesis, and HIV-1 viral transcription. Increased PP1 activity has been observed in the end stage of heart failure. Studies in both human and mice suggest that PP1 is an important regulator of cardiac function. Mouse studies also suggest that PP1 functions as a suppressor of learning and memory. Three alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Conjugation	HIS
Molecular Weight	39.700kDa inclusive of tags
Biological activity	>3,000 units/mg. Enzymatic activity was confirmed by measuring the amount of enzyme hydrolyzing 1 nmole of p-nitrophenyl phosphate (pNPP) per minute at 37 °C,
