

Recombinant Human PSEN1

Cat. No. PSEN1-29963TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human Presenilin 1 with N terminal proprietary tag, 36.63kDa inclusive of tag.
Species	Human
Source	Wheat Germ
ProteinLength	100 amino acids
Description	Alzheimers disease (AD) patients with an inherited form of the disease carry mutations in the presenilin proteins (PSEN1; PSEN2) or in the amyloid precursor protein (APP). These disease-linked mutations result in increased production of the longer form of amyloid-beta (main component of amyloid deposits found in AD brains). Presenilins are postulated to regulate APP processing through their effects on gamma-secretase, an enzyme that cleaves APP. Also, it is thought that the presenilins are involved in the cleavage of the Notch receptor, such that they either directly regulate gamma-secretase activity or themselves are protease enzymes. Several alternatively spliced transcript variants encoding different isoforms have been identified for this gene, the full-length nature of only some have been determined.
Molecular Weight	36.630kDa inclusive of tags
Tissue specificity	Expressed in a wide range of tissues including various regions of the brain, liver, spleen and lymph nodes.
