

Recombinant Human PSMB2, His-tagged

Cat. No. PSMB2-31209TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length, Human Proteasome subunit beta type 2 (amino acids 1-201) with an N terminal His tag, predicted Mwt: 24.9 kDa inclusive of tags.
Species	Human
Source	E.coli
ProteinLength	201 amino acids
Description	The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. This gene encodes a member of the proteasome B-type family, also known as the T1B family, that is a 20S core beta subunit. Multiple alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
Conjugation	HIS
Molecular Weight	24.900kDa inclusive of tags
