

Recombinant Human RERE

Cat. No. RERE-29593TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human RERE (amino acids 85-193) with N terminal proprietary tag, 37.62 kD.
Species	Human
Source	Wheat Germ
ProteinLength	109 amino acids
Description	This gene encodes a member of the atrophin family of arginine-glutamic acid (RE) dipeptide repeat-containing proteins. The encoded protein co-localizes with a transcription factor in the nucleus, and its overexpression triggers apoptosis. A similar protein in mouse associates with histone deacetylase and is thought to function as a transcriptional co-repressor during embryonic development. Multiple transcript variants encoding different isoforms have been found for this gene.
Molecular Weight	37.620kDa inclusive of tags
Tissue specificity	Widely expressed. Expressed in tumor cell lines.
