

Recombinant Human RPS6 Protein, His tagged

Cat. No. RPS6-30769TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human RPS6 Protein with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-249 aa
Description	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a cytoplasmic ribosomal protein that is a component of the 40S subunit. The protein belongs to the S6E family of ribosomal proteins. It is the major substrate of protein kinases in the ribosome, with subsets of five C-terminal serine residues phosphorylated by different protein kinases. Phosphorylation is induced by a wide range of stimuli, including growth factors, tumor-promoting agents, and mitogens. Dephosphorylation occurs at growth arrest. The protein may contribute to the control of cell growth and proliferation through the selective translation of particular classes of mRNA. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.

Purity > 80% by SDS-PAGE

Storage Store it under sterile conditions at -20 to -80 centigrade. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

Storage Buffer Lyophilized from 0.5% Trehalose, 6M Urea, 100mM sodium phosphate, 10mM sodium chloride, pH 4.5

Reconstitution It is recommended that sterile water be added to the vial to prepare a stock solution of 0.64 mg/mL. Centrifuge the vial at 4 centigrade before opening to recover the entire contents.
