

S-X resin

Cat. No. styrene divinylbenzene-54A **Lot. No.** (See product label)

SPECIFICATION

Product Overview S-X resins are a series of porous crosslinked polystyrene polymers used for gel permeation separations of lipophilic polymers and low molecular weight, hydrophobic materials in the presence of organic solvents. These nonaqueous spherical beads are used in much the same way aqueous gels are used, except that they are swollen with organic solvents during the separation.

Cat.no styrene divinylbenzene-54A

Matrix styrene divinylbenzene beads
