

Large-scale Protein Production

Creative BioMart is fully equipped to meet the production demand for large quantities of pure and active protein from milligrams to a few hundreds grams. And Bacterial (e.g. Escherichia coli) or eukaryotic cell-based culture (e.g. yeast, insect and mammalian cell) can be performed accordingly.

Let us help you:

1. Choose our catalog products to initial the protein large-scale production.
2. Give us the sequence of target protein then we will optimize the process development and fermentation strategies accordingly to produce the quantities you need.

Coupled with our [large scale protein purification services](#), we have delivered more than 3,000 proteins, including those at the scale of 300 grams from a single project.

From Bench-Top Fermenter to Bioprocess Scale-Up Facility
